

Abstract of the Disclosure:

A drying rack for the stationary drying of articles to be dried, which can be installed in the drum of a clothes dryer. The articles can be knitwear or shoes that must not be moved  
5 when dried even when the drum turns. For articles, especially, wool articles, to dry faster, the drying rack has at least two spaced-apart surfaces disposed one on top of the other on which the articles to be dried can be spread, thereby substantially enlarging the surface of the articles to be  
10 dried. As such, the drying air current can better remove the moisture and larger individual wool articles can be dried in the clothes dryer.
